

NATIONAL WOMEN & GIRLS HIV/AIDS AWARENESS DAY

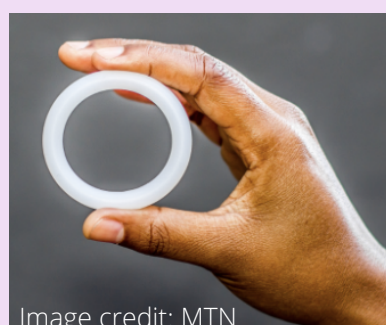

March 10, 2021

The Women's HIV Research Collaborative celebrates these recent advancements in research focused on cis and trans women.

Follow us on [Facebook](#) for more!

A RING FOR PREVENTION

Let's put a ring on it! A [monthly vaginal ring](#) may soon become the first biomedical HIV prevention method designed specifically for cisgender women to be approved for use. Not diamonds, but the dapivirine ring is a girl's best friend!

A SHOT FOR PREVENTION

A bimonthly injection works to prevent HIV! To the more than [550 transgender women](#) and [3,200 cisgender women](#) who participated in these studies, we have you to thank!

THE REPRIEVE STUDY

The largest randomized HIV study to date has begun reporting results! [Find out](#) what we're learning about the health of people living with HIV, including the more than 2,400 women, transgender, and gender non-conforming study participants.

TRANSGENDER WOMEN

Two major research networks are launching their very first studies designed exclusively for transgender women! Learn more about the [I Am study](#), and stay tuned for the "Get it Right" study. Both studies are looking at gender-affirming hormones and HIV.

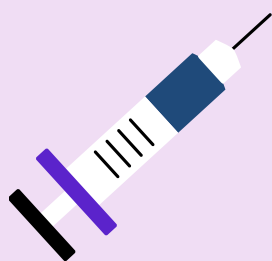

HIV VACCINE RESEARCH

Women rock! "Imbokodo" is a Zulu word meaning "rock," and it's also the name of [an HIV vaccine study](#) with 2,600 cisgender women in 5 African countries. Keep your eye on this important study!

DR. CORBETT SAVES THE DAY

[Kizzmekia S. Corbett, PhD](#), may have saved your life. A viral immunologist at the National Institutes of Health, Dr. Corbett has been at the forefront of COVID-19 vaccine development. Thank you, Dr. Corbett, and the countless brilliant women in *all* research!
